PCC GROUP PORTFOLIO FOR AGROCHEMICAL APPLICATIONS

Chlorobenzenes and Hydrochloric acid	5
Raw materials and intermediates	6
Dispersing Agents	7
EXOLagroline	8
Adjuvants	10
Wetting agents	12
Emulsifiers	16
Low foaming agents	20
Other products	21

The high quality and chemical purity of PCC Group products guarantees stability and repeatability of production processes for our customers.

Chlorobenzen and Hydrochloric acid

Monochlorobenzene, ortodichlorobenzene and hydrochloric acids are the main products used in agrochemical production. PCC Rokita SA is one of two manufacturers of chlorobenzenes in Europe. The products from our installations are

of the highest global quality and meet requirements of all possible applications. Our synthesis plant produces hydrochloric acid with unique concentrations and exceptional purity.

COMMERCIAL NAME	CHEMICAL FORMULA	OTHER COMMERCIAL NAMES	FORM	CONCENTRATION	QUALITY	CHARACTERISTIC	PACKING	MAIN APPLICATIONS
Monochlorobenzene	C_6H_5Cl	Chlorobenzene, MCB, phenyl chloride	Liquid	99.9%	Very High	Product of chlorobenzene plant	Steel drums 220 kg, road tank cars, isotanks, rail tank cars	Component for the production of fungicides, herbicides and other plant protection products
Ortodichlorobenzene	$C_6H_4Cl_2$	1.2 dichlorobenzene, ODCB	Liquid	99.8%	High	Product of chlorobenzene plant	Steel drums 220 kg, road tank cars, isotanks	Component for the production of fungicides, herbicides and other plant protection products
Hydrochloric acid technical grade	HCl	Hydrogen chloride water solution	Liquid	$\geq 31\%$ water solution	Standard	Product of chlorobenzene plant	IBC 1000L, steel drums 220 kg, road / rail tank cars	Component for the production of fungicides, herbicides and other plant protection products
Hydrochloric acid food grade	HCl	Hydrogen chloride water solution	Liquid	$\geq 33\%$ water solution	Very High	Product of inorganic synthesis, approved for use in food industry installation and production processes	IBC 1000L, steel drums 220 kg, road / rail tank cars	Component for the production of plant protection products
Synthetic hydrochloric acid	HCl	Hydrogen chloride water solution	Liquid	$\geq 33\%$ water solution	High	Product of inorganic Synthesis	IBC 1000L, steel drums 220 kg, road / rail tank cars	Component to the production of plant protection products

Raw materials and intermediates

Phosphorus Chemistry Business Unit has high pure intermediates and raw materials to offer agrochemicals suppliers, polymer additives manufacturers as well as to the pharmaceutical industry.

PRODUCT NAME	CAS NO	PARAMETERS	APPLICATION	FEATURE
Phosphorus trichloride	7719-12-2	Appearance at 25°C: Density at 20°C: Phosphorus trichloride, % (w/w):	colourless, clear liquid 1.570-1.580 g/ml typical: min. 99.5 HQ grade: min. 99.7	
Phosphorus oxychloride	10025-87-3	Appearance at 25°C: Density at 20°C: Phosphorus oxychloride, % (w/w):	colourless or straw liquid with acceptable opalescence without sediment 1.672-1.678 g/ml typical: min. 99.5 HQ grade: min. 99.7	Products are used as raw materials/ intermediates in preparation of crop protection chemicals e.g. in herbicides and insecticides.

• Raw materials / intermediates

Dispersing Agents

Phosphorus Chemistry Business Unit has dispersing agents under the brand name Rodys to offer a wide range of applications, including crop protection chemicals.

PRODUCT NAME	CHEMICAL NAME	CAS NO	PARAMETERS	APPLICATION	FEATURE
Rodys CP	Naphthalenesulfonic acid, polymer with formaldehyde, sodium salt	9084-06-4	Appearance: powder pH 5% solution: 7.5-10.5 Sulphates(VI) as SO ₄ ²⁻ , % (w/w): 12 max Water Content,% (w/w): 10 max	Rodys AGR is a highly efficient dispersing agent based on naphthalene derivatives. Thanks to its proven capability to disperse ingredients it can improve the activity of pesticides. Rodys AGR plays an important role in dry and liquid sprayable formulations. The best effects are presented in wettable powders (WP), water dispersible granules (WG) and suspension concentrates (SC).	• Dispersing Agent

EXOLagroline

EXOLagroline is our offering of products for applications in crop protection. PCC Exol SA has a wide portfolio of additives for various ag-

rochemical formulations. The following table shows the different product groups and their main applications by formulation type.

PRODUCT GROUP	EC	SC	SE	EW	ME	OD	SL	WG	WP	RTU	GB	FS	EO
Alkyl Sulfates		•	•			•		•	•	•	•

Formulation codes:

- EC - Emulsifiable Concentrate
- SC - Suspension Concentrate
- SE - Suspo-Emulsion
- EW - Emulsion (Oil-in-Water)
- ME - Microemulsion
- OD - Oil Dispersion
- SL - Soluble Concentrate
- WG - Water Soluble Granules
- WP - Water Soluble Powders
- RTU - Ready to Use
- GB - Granular Baits
- FS - Flowable Suspension
- EO - Emulsion Water in Oil

PCC Group creates high
quality, environmentally
friendly products.

Adjuvants

The aforementioned enhanced biological performance of pesticide products are becoming more and more crucial in Crop Protection in order to optimize the amount of pesticide applied, improve handling and safety by applicators and consumers. Adjuvants are used to aid or modify the action of an agrochemical or

its physical characteristics. In pesticides, they are often used for wetting, spreading, deposit building, emulsifying, deflocculating or water modifying. Adjuvants must be matched with the pesticides, the crop species, the weed species and the prevailing environment for maximum effectiveness.

Side view of leaf
- without adjuvants

Side view of leaf
- with adjuvants

Surfactants are adjuvants that reduce surface tension within the external surface layers of water. Surfactants work by improving contact between spray droplets and plant surfaces, and enhance absorption by:

- making the spray solution spread more uniformly on the plant
- increasing retention ('sticking') of spray droplets on the plant
- increasing the penetration through hairs, scales, or other leaf surface structures
- preventing the crystallization of spray deposits
- slowing down the drying and increasing water retention in the spray droplets

Benefits

- improve the biological performance of pesticides
- enhance the penetration into a leaf or soil
- improves the rain-fastness, spreader and sticker
- reduces drift

Adjuvants are already included in the formulations of some herbicides available for sale or they may be purchased separately and added into a tank mix prior to use. In this way, adding an appropriate adjuvant can decrease the amount of herbicide applied and lower the total costs of weed control.

E 5 g in 25 g butyldiglycol 25%

Wetting agents

Wetting agents are substances that decrease the surface tension of water permitting it to spread drops onto a surface increasing the spreading abilities of a liquid. Reducing the surface tension lowers the energy required to spread drops onto a film, thus weakening the cohesive properties of the liquid and strengthening its adhesive properties.

Benefits

- enables the wetting of dusty or hard to wet plants
- decreases the surface tension of water, allowing for spread and penetration
- allows for the reduction of spray volumes
- creates greater or equal up-take of pesticide over a shorter time, thus enhancing rain-fastness

E 5 g in 25 g butyldiglycol 25%

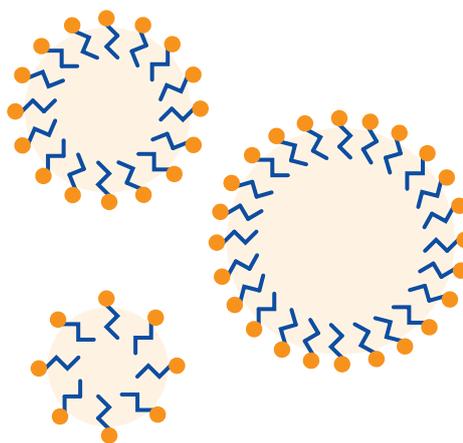

Emulsifiers

Agents that promote the formation of an emulsion. An emulsifier involves water soluble hydrophilic parts and oil-soluble lipophilic parts within it. By adding an emulsifier to a mixture of water and oil, the emulsifier is arranged on the interface, anchoring its hydrophilic part into water and its lipophilic part into oil. On the interface surface of water, the hydrophilic part and the lipophilic part are

adsorbed and arranged around the interface. This reduces interfacial tension. The result is that oil and water are easily mixed. The hydrophilicity and lipophilicity are different among emulsifiers, and the balance between the two is called HLB value (ranges from 0 to 40). An emulsifier with higher lipophilicity shows a lower HLB, whereas, higher hydrophilicity has a high HLB.

Low HLB surfactants

High HLB surfactants

Benefits

- enables the wetting and dispersion of the oil phase into the aqueous phase by decreasing interfacial tension
- facilitates the dispersion of the oil-phase upon addition into water
- introduces electrostatic and steric stabilization to fine droplets; prevents coalescence or flocculation
- improves compatibility with other components in the aqueous phase

B 1 g in 100 g NaCl (50 g/l)

C 1 g in 100 g NaCl (100 g/l)

D 5 g in 45 g butyldiglycol 25%

E 5 g in 25 g butyldiglycol 25%

Low foaming agents

This group of surfactants is high-performance and shows excellent low foam characteristics (inhibits bubbles forming in an agitated liquid by reducing the surface tension), chemical stability and a long list of other valuable performance properties. They are made by polym-

erizing ethylene oxide (EO), propylene oxide (PO) in the same molecule. The ratio and order of oxide addition, together with the choice of initiator, regulate the chemical and physical properties.

 C 1 g in 100 g NaCl (100 g/l)
 D 5 g in 45 g butyldiglycol 25%
 E 5 g in 25 g butyldiglycol 25%

Benefits

- prevents the formation of foam
- combines of low foaming properties with other functions (wetting, emulsifying)

Notes for guidance concerning the functional parameters and notation used in the catalogue

HLB (Hydrophilic-Lipophilic Balance)

The hydrophilic-hydrophobic balance is a parameter that determines the ratio of the content of the hydrophilic group and that of the hydrophobic group in a particle. The validity scope of the HLB number for non-ionic surface-active compounds is included within the range of 0 to 20 and is the measure of the share of the hydrophilic group in the particle.

$$\text{HLB} = 20 \cdot \frac{\text{molecular mass of hydrophilic part}}{\text{molecular mass of compound}}$$

On the other hand, for aqueous solution of ionic surface active agents acquire additional transformations increasing their degree of hydrophilicity, the value of the HLB number goes up to 40.

HLB for ester type compounds (polyoxyethylenated fatty acids):

$$\text{HLB} = 20 \cdot \left(1 - \frac{\text{LZ}}{\text{LK}}\right)$$

where:

LZ saponification number of oxyethylenation product, mgKOH/g

LK acid number of acids subjected to oxyethylenation, mgKOH/g

On the basis of the HLB scale, the range of the utility fitness of surface-active agents can be determined.

HLB NUMBER	EO CONTENTS IN PRODUCT, %	PRODUCT APPLICATION
1-3	5-15	Anti-foaming agent
4-6	20-30	Emulsifier W/O
7-11	35-55	Wetting agent
8-18	40-90	Emulsifier W/O
10-15	50-75	Detergent
10-18	50-90	Solubilizer

Cloud point

Cloud point is an indicator determining the behaviour of water or other organic solutions of nonionic surfactants. Solutions of surfactants become cloudy during heating and revert to a clear solution at a certain temperature when cooled - this temperature is defined as 'cloud point'.

Depending on the temperature range at which the solution becomes cloudy, five determination methods are discriminated:

Method A – aqueous solution (10 - 90°C)

Method B – solution of NaCl 50g/l (>90°C)

Method C – solution of NaCl 100g/l (>90°C)

Method D – solution 45g of butyl diglycol/water (<10°C)

Method E – solution 25 g of butyl diglycol/water (<10°C)

PCC Group

We build value through sustainable innovation

Operating in 17 countries,
in 39 different locations,
PCC SE currently employs
3300 people.

Each project or venture with a long-term success story shares one common thing – it's based on in-depth market research and on the knowledge acquired through years of experience. It is knowledge and experience that enables us to constantly aim higher and deliver greater value through dynamic and sustainable world-wide development of the PCC Group.

The companies, operating as a part of the PCC Group, act with responsibility and care.

We only embark on new business challenges when we are certain that we have the skills and knowledge to achieve success. We operate in three major markets: chemicals, energy and logistics. Several dozen business units, managed by PCC SE, work in synergy to generate the greatest possible competitive advantage in both local and international markets. Each day nearly three thousand professionals contribute their energy, and effort, to secure the sustainable

development of the PCC Group. The key element of our strategy is to ensure the development of each individual business unit through taking advantage of innovative technology and new market applications. We achieve our goals in a sustainable and responsible way – we care about the environment and the society within which we operate.

We are always ready to reach our strategic goals. Efficient and dynamic management helps our employees to fully develop their potential and therefore enhances the overall PCC Group value. Joint enterprises and individual initiatives of our companies are the results of the entrepreneurship culture promoted within

the PCC Group. Our philosophy is built on simple values - integrity, trust and reliability. We believe that following those principles is the only way to build a long-term competitive advantage.

The PCC Group currently employs nearly 3300 people. We operate in 17 countries, in 39 different locations around the world. Our portfolio includes eight basic segments. Individual operational responsibility is assigned to seven of them - Polyols, Surfactants, Chlorine, Specialty Chemicals, Consumer Products, Energy and Logistics. Each of these segments is supported by 19 business units, all under the management of the PCC Group.

PCC Intermodal SA

PCC Group in the world

In accordance with our environmental concerns, this publication from the PCC Group was printed on Cocoon Silk - an ecological double-sided-coated matt paper. This paper is made of 100% waste paper via environment-friendly technology. The FSC® Certificate confirms that the raw materials used during the paper production process come from well-managed forests or other certified and controlled sources.

TEXT PAGES

Brand	Cocoon Silk
Grammage	150
Number of pages	28

COVER PAGES

Brand	Cocoon Silk

Number of pages	4

PUBLICATION

Size (cm)	21 x 29.7
Quantity	100

By using Cocoon Silk rather than non-recycled paper, the environmental impact was reduced by:

Carbon footprint data evaluated by Labelia Conseil in accordance with the Bilan Carbone® methodology. Calculations are based on a comparison between recycled paper used versus a virgin fibre paper - according to the latest European BREF data (virgin fibre paper) available.
