

## TopMeister Stein - impregnation for split granite

<b>CHEMICAL NAME</b>	Mixture of potassium hydroxide and silane
<b>CAS NUMBER</b>	Mixture
<b>FUNCTION</b>	Impregnating agent
<b>TECHNICAL REQUIREMENTS</b>	Apperance at (20÷25)°C..... Colourless liquid without mechanical impurities pH of the solution .....min. 12  Solubility in water .....very good Density at temperature, 20°C, g/ml..... 1,04 Odor .....odourless
<b>APPLICATION</b>	Professional product designed to protect against penetration of dirt, and gives water-repellence to split granite. The impregnate does not affect the colour and appearance of the surface to be protected. It is used to protect façade panels, terrace panels and fence elements. The product forms a protective coating that protects the surface against water and moisture ingress. Prevents moss from growing.
