

TopMeister Stein - impregnation for sandstone

CHEMICAL NAME	Mixture of potassium hydroxide and silane
CAS NUMBER	Mixture
FUNCTION	Impregnating agent
TECHNICAL REQUIREMENTS	<p>Apperance at (20÷25)°C..... Colourless liquid without mechanical impurities</p> <p>pH of the solutionmin. 12</p> <p>Solubility in watervery good</p> <p>Density at temperature, 20°C, g/ml..... 1,04</p> <p>Odorodourless</p>
APPLICATION	<p>A professional preparation used to protect sandstone against penetration of dirt and, gives water-repellence to sandstone. The impregnate does not affect the colour and appearance of the protected surface. Product used on façade panels, terraces, fence elements, in architectural detail. It is a ready-to-use product which, thanks to appropriately selected ingredients and nanoparticles, penetrates the material up to several millimetres. On the surface of the impregnated sandstone, it forms a protective coating that protects against the ingress of water and dirt.</p>
