

## Rokryl KSP

|                               |                                                                                                                                                              |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CHEMICAL NAME</b>          | Aqueous dispersion of an acrylic-styrene copolymer                                                                                                           |
| <b>TECHNICAL REQUIREMENTS</b> | Appearance ..... viscous, white, light cream liquid<br>Dry matter, % (m/m).....48 ÷ 52<br>pH of product .....6.0 ÷ 8.0                                       |
| <b>GENERAL DATA</b>           | Solidification point, °C .....approx. 0<br>Solubility in water ..... dilutable<br>Density at 20°C, g/ml ..... 1.2<br>Viscosity at 20°C, mPa·s.....500 ÷ 2000 |
| <b>APPLICATION</b>            | Rokryl KSP is used as glue for paper, tape and self-adhesive labels.                                                                                         |
