

TopMeister Stein Extra - impregnation for split granite

CHEMICAL NAME	Mixture of potassium hydroxide and silane
CAS NUMBER	Mixture
FUNCTION	Impregnating agent
TECHNICAL REQUIREMENTS	<p>Apperance at (20÷25)°C..... Colourless liquid without mechanical impurities</p> <p>pH of the solutionmin. 12</p> <p>Solubility in watervery good</p> <p>Density at temperature, 20°C, g/ml..... 1,04</p> <p>Odorodourless</p>
APPLICATION	<p>Professional, specially reinforced product designed to protect against penetration of dirt, and gives water-repellence to split granite. The impregnate does not affect the colour and appearance of the surface to be protected. It is used to protect façade panels, terrace panels and fence elements. The product forms a protective coating that protects the surface against water and moisture ingress. Prevents moss from growing. TopMeister Stein Extra is designed to protect uncoloured split granite as well as granite with added topping.</p>
